Quorum

AI-Native Casework for Government

A multimodal workflow engine that sees, hears, and understands cases.

Built with Google Cloud + Gemini Live API | • Live Demo Next

The Problem

Offices are drowning in constituent messages and cases due to legacy tools.

80M

Messages sent to Congress per year, causing massive overload.

1.5M

Complex casework requests processed entirely manually.

300K+

Average email and message backlog in a single office.

Staff Overwhelm

The majority of work hours are spent on tedious triage tasks instead of actual policy work or constituent service.

Low Public Trust

Legacy software is opaque and slow, directly contributing to the 80% of Americans who disapprove of the government.

The Solution: Quorum

A multimodal AI workflow system for end-to-end case management.

Multimodal Intake

Upload, speak, or paste. Instantly processes text, voice recordings, and image inputs without manual forms.

AI Case Parsing

Automatically extracts the core problem, applies topic tags, and summarizes key notes from the constituent.

Smart Scoring

Evaluates and ranks cases based on severity, urgency, risk, and stakeholder impact—going beyond basic sentiment.

Agentic Assignment

Identifies the best case owner based on their skills and real-time availability, and clearly explains the reasoning.

1-Click Workflow

Action-oriented interface replaces complex dashboards. Staff simply click to Assign, Approve, or Request Review.

Role-Based Views

Clean, distraction-free views tailored precisely for Case Workers, Managers, Approvers, and Executives.

How It Works

Gemini Live agents orchestrate end-to-end casework. **Principle: One screen. One action. One decision.**

1. **Case Intake**
   Text, voice, or image input via any channel.
2. **Parse & Label**
   Extract the core problem & auto-tag context.
3. **Score & Prioritize**
   Rank by urgency, risk, & stakeholder impact.
4. **Assign & Explain**
   Match to best owner & explicitly state why.
5. **Notify & Track**
   Alert stakeholders & monitor progression.
6. **Human Oversight**
   1-click approval or manual review if flagged.
7. **Learn & Improve**
   System adapts parameters from human actions.

Continuous AI Orchestration layer

At every stage, Gemini provides a transparent *"Why this decision"* rationale that remains visible across all role-based views.

Impact & Results

Transformational outcomes for government offices powered by multimodal AI.

Eliminate 20+ Hours/Day

Of manual data entry and triage work per office, freeing staff to focus on policy and service.

Resolution in Hours, Not Months

Dramatically accelerated case triage and resolution workflows through intelligent routing.

Less Manual Forms

Instant multimodal intake automatically processes cases from text, voice, or image sources.

Transparent AI Decisions

Build public trust and internal accountability with clear, permanently documented AI reasoning.

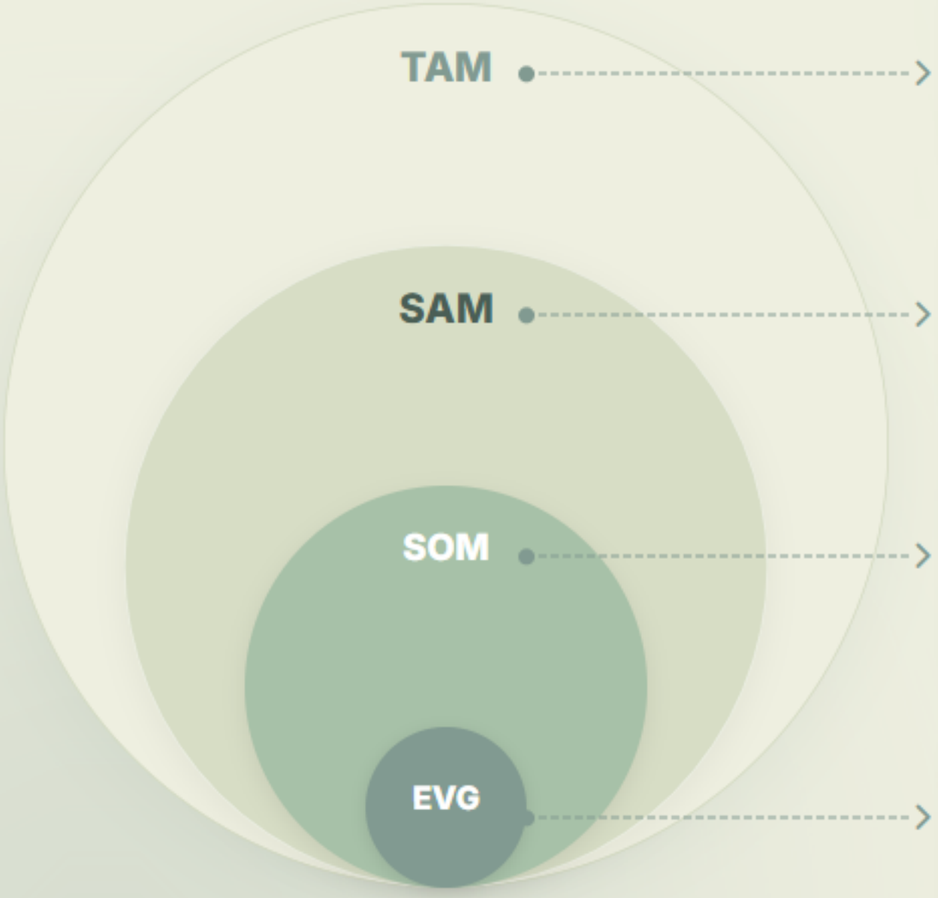
Role-Based Efficiency

Tailored interfaces for Case Workers, Managers, Approvers, and Execs eliminate UI clutter.

Real-Time Sentiment Tracking

Monitor and map constituent issues, satisfaction, and trends across districts instantly.

Market Opportunity



Total Addressable Market $75B

Expand partnerships

2024 U.S. Federal IT Budget

Serviceable Available Market $3.2B

Scale to fit greater market

Federal agencies, state/local gov, White House, international parliaments, NGOs

Serviceable Obtainable Market $98M

State, Local governments

U.S. House/Senate 535 offices, state legislatures 7,383 legislators

Early Target Customers

Local city offices, outreach to llegal entities

Offices with 300K+ constituent message backlogs

Tech Stack & Architecture

React | Node.js | MongoDB | Gemini Live API | Google Cloud

Security & Compliance

Priority for Gov Deployment

- SOC 2 Type 2
- Google Cloud Infrastructure
- TX-RAMP
- End-to-End Encryption
- HIPAA-Ready Architecture
- Gov Security clearance
